Important Information

*Rain water drainage and outlet point varies depending on system projections. Please contact your account manager for an accurate information and details on this matter.

*There is a natural slope for excess water to be drained, therefore there will be a level difference between the front and back height. Please contact your account manager for an accurate information antd further detailing on this matter.

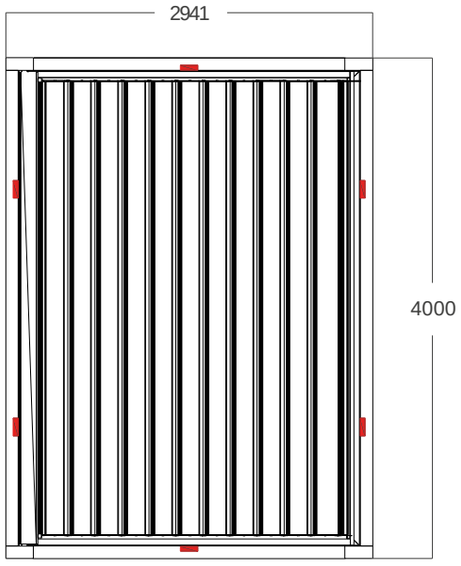
*In order for the excess rain water to be drained correctly from system's rain drainage outlet point our system requires levelled surface installation. Under that reason the system projection direction must be advised to you by our technical department. To avoid any discrepancy please contact your account manager.

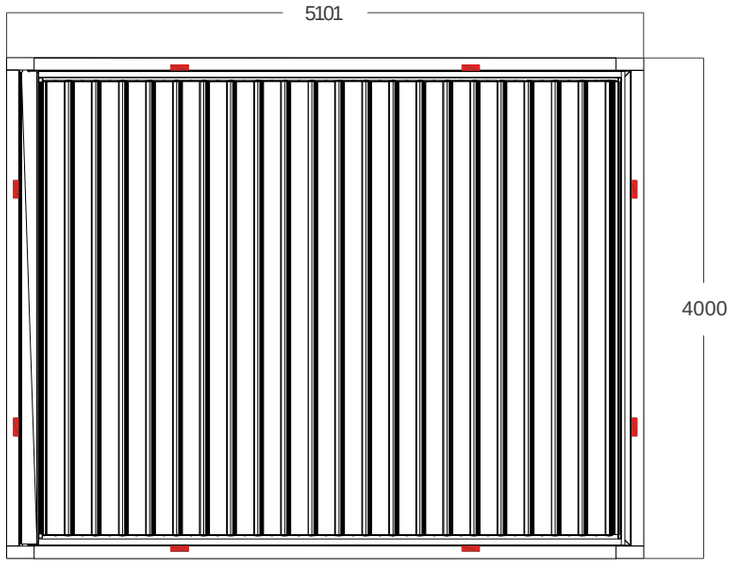
* All dimensions shown above are in milimeters.

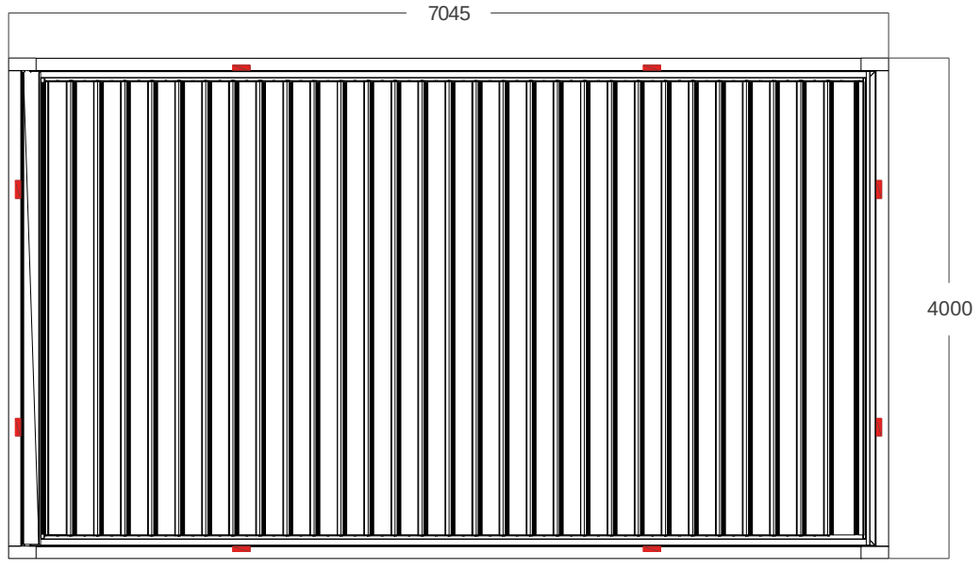
V130619

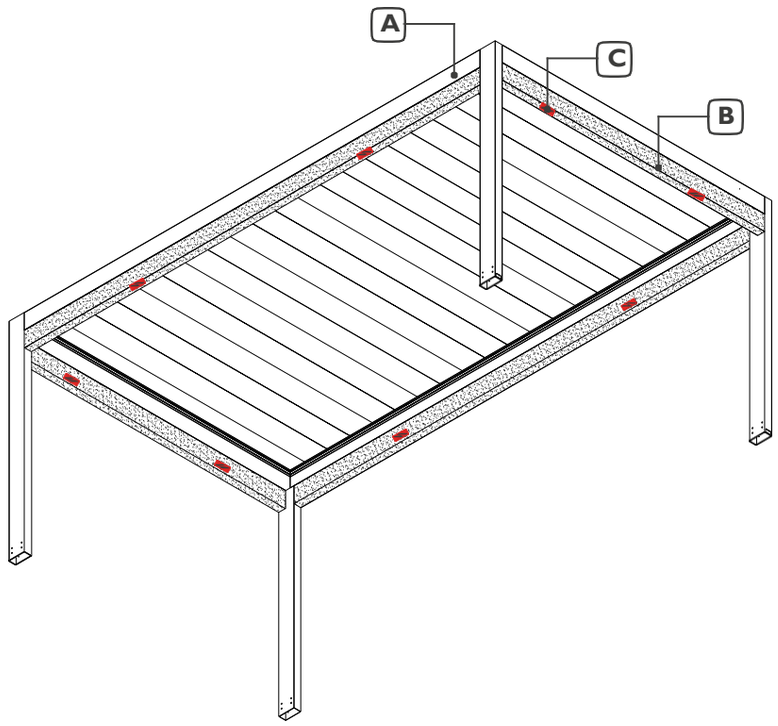
Possible Module Combinations

B CubeFreedom









A: Standart Carrier Post and Side Beam Profile
B: Carrier Post and Side Beam Profile for Audio System
C: Audio Systems are assembled into the Additional Beams and have maxiumum of 2 meters gap in between them.

Note: The Audio System modules can be more than 2 upon requirements. The drawings show 2 of them on each side for demonstration purposes.

* All dimensions shown above are in milimeters.
